

ASSEMBLY INSTRUCTION FOR THE **ME200T** MODULE OF THE ACCELERATOR PEDAL

Locate a connection of the electronic accelerator pedal. It is usually installed in the cabin, near the accelerator pedal (see fig. A).

Figure A

Some cars have electronic control units, even if it seems that they are equipped with a wire-accelerator pedal. In fact, one can see that the connection is located within the engine room, when tracing the wire (see fig. B).

Figure B

IMPORTANT: Some cars feature this connection under the accelerator pedal block, e.g. BMWs. Therefore, it is required to disassemble the accelerator pedal to see the connection. (Figure C).

Disconnect the original connection from the accelerator pedal (figure D).

Install the group of wires provided by Magneti Marelli, between the connection of the original group of wires in the car and the connection of the accelerator pedal (figure E).

When the ME200T control box has been programmed (see the instruction attached to the box), connect it to the light grey connection of the Magneti Marelli group of wires, and install it in the cabin, making sure that it won't obstruct the pedal.

Note: All pictures have been presented for informative purposes, exclusively.

!!! IMPORTANT!

Magneti Marelli Aftermarket Parts & Services S.p.A. would like to remind you that the additional control box is intended for HIGH-PERFORMANCE purposes, exclusively. Therefore, it can be used on racetracks, private tracks or on selected roads that are inaccessible to traffic, exclusively.

Magneti Marelli Aftermarket Parts & Services S.p.A. shall not be responsible for improper use of the device. The user is always responsible to observe the Highway Code and binding regulations.

Magneti Marelli Aftermarket Parts & Services S.p.A. shall not be responsible for any potential damage caused by the car, resulting from faults of the product or an incorrect installation of the afore-mentioned products.
